Microsoft Windows Security Update for October 2026

KB5126836 (https://support.microsoft.com/en-in/help/5126836)
KB5126868 (https://support.microsoft.com/en-in/help/5126868)
KB5126835 (https://support.microsoft.com/en-in/help/5126835)
KB5126646 (https://support.microsoft.com/en-in/help/5126646)
KB5126655 (https://support.microsoft.com/en-in/help/5126655)
KB5126651 (https://support.microsoft.com/en-in/help/5126651)

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or may affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to refer following articles for more information on the vulnerabilities and patches.

KB5126836 (https://support.microsoft.com/en-in/help/5126836)
KB5126868 (https://support.microsoft.com/en-in/help/5126868)
KB5126835 (https://support.microsoft.com/en-in/help/5126835)
KB5126646 (https://support.microsoft.com/en-in/help/5126646)
KB5126655 (https://support.microsoft.com/en-in/help/5126655)
KB5126651 (https://support.microsoft.com/en-in/help/5126651)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

KB5126836 (https://support.microsoft.com/en-in/help/5126836)

KB5126868 (https://support.microsoft.com/en-in/help/5126868)

KB5126835 (https://support.microsoft.com/en-in/help/5126835)

KB5126646 (https://support.microsoft.com/en-in/help/5126646)

KB5126655 (https://support.microsoft.com/en-in/help/5126655)

KB5126651 (https://support.microsoft.com/en-in/help/5126651)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

Missing Patch/KB: KB5126655
File: %windir%\system32\ntoskrnl.exe

Last Fixed: N/A

THREAT:

Multiple Vulnerabilities exist in Microsoft .Net Framework.

Following KBs are covered in this detection:
5127685
5127686
5127684
5127693
5127687
5127666
5127688
5127664
5127660
5127694
5127668
5127696
5127692
5127691
5127667
5127690
5127683
5127689

This security update is rated Important for supported versions of Microsoft .NET Framework.
.NET Framework 2.0, 3.0, 3.5, 4.6.2, 4.7, 4.7.1, 4.7.2, 4.8, and 4.8.1

IMPACT:

A vulnerable .NET Framework version may be prone toRemote Code Execution or Elevation of Privileges

SOLUTION:

Customers are advised to refer to the the Article(s):
.NET Framework (https://msrc.microsoft.com/update-guide)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

CVE-2026-97801 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-97801)

CVE-2026-96958 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96958)

CVE-2026-96959 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96959)

CVE-2026-96960 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96960)

CVE-2026-108398 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-108398)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

KB5127687 is not installed
%windir%\Microsoft.NET\Framework64\v4.0.30319\Mscorlib.dll Version is 4.8.4795.0
%windir%\Microsoft.NET\Framework\v4.0.30319\Mscorlib.dll Version is 4.8.4795.0

4 Microsoft Edge Based on Chromium Prior to 154.0.4258.62 Multiple Vulnerabilities New

QID: 388908
Category: Local

Associated CVEs:	-
Vendor Reference:	Edge (chromium based) 154.0.4258.62
Bugtraq ID:	-
Service Modified:	12 Oct 2026
User Modified:	-
Edited:	No
PCI Vuln:	Yes
Ticket State:	
QDS:	55

First Detected: 22 Oct 2026 09:16:13 AM (GMT+0200)
Last Detected: 22 Oct 2026 09:16:13 AM (GMT+0200)
Times Detected: 1
Last Fixed: N/A

THREAT:

EdgeChromium has released security update for Mac and Windows to fix the vulnerabilities.

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to upgrade to version 154.0.4258.62 or later
(https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#october-05-2026)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

Edge (chromium based) 154.0.4258.62 (https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#october-05-2026)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

C:\Program Files (x86)\Microsoft\Edge\Application\msedge.exe Version is 153.0.4234.32

4 Microsoft .NET Security Update for October 2026 New

QID:	92476
Category:	Windows
Associated CVEs:	CVE-2026-105016, CVE-2026-58280, CVE-2026-70007, CVE-2026-70035, CVE-2026-83520, CVE-2026-85363, CVE-2026-96225, CVE-2026-96229, CVE-2026-96231, CVE-2026-96232, CVE-2026-96233, CVE-2026-96234, CVE-2026-96235, CVE-2026-96237, CVE-2026-96238, CVE-2026-96957, CVE-2026-96224, CVE-2026-70194, CVE-2026-70197, CVE-2026-70165, CVE-2026-70190, CVE-2026-70161, CVE-2026-70174, CVE-2026-87697, CVE-2026-66822, CVE-2026-69651

2 Enabled Cached Logon Credential Active

QID:	90007
Category:	Windows
Associated CVEs:	-
Vendor Reference:	-
Bugtraq ID:	-
Service Modified:	16 Feb 2026
User Modified:	-
Edited:	No
PCI Vuln:	Yes
Ticket State:	
QDS:	50

First Detected: 01 Sep 2026 07:50:17 PM (GMT+0200)
Last Detected: 22 Oct 2026 09:16:13 AM (GMT+0200)
Times Detected: 3
Last Fixed: N/A

THREAT:

Windows NT may use a cache to store the last interactive logon (i.e. console logon), to provide a safe logon for the host in the event that the Domain Controller goes down. This feature is currently activated on this host.

IMPACT:

Unauthorized users can gain access to this cached information, thereby obtaining sensitive logon information.

SOLUTION:

We recommend that you locate the following Registry key, and then set or create a REG_SZ 'CachedLogonsCount' entry with a '0' value:
HKEY_LOCAL_MACHINE\Software\Microsoft\Windows Nt\CurrentVersion\Winlogon

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon cachedlogonscount = 4

2 HTTP Security Header Not Detected port 80/tcp Active

QID:	11827
Category:	CGI
Associated CVEs:	-
Vendor Reference:	-
Bugtraq ID:	-
Service Modified:	02 Jan 2025
User Modified:	-
Edited:	No
PCI Vuln:	Yes
Ticket State:	
QDS:	30

First Detected: 04 Aug 2026 07:51:49 PM (GMT+0200)
Last Detected: 22 Oct 2026 09:16:13 AM (GMT+0200)
Times Detected: 4
Last Fixed: N/A

THREAT:

This QID reports the absence of the following HTTP headers (https://www.owasp.org/index.php/OWASP_Secure_Headers_Project#tab=Headers) according to CWE-693: Protection Mechanism Failure (https://cwe.mitre.org/data/definitions/693.html):

X-Content-Type-Options: This HTTP header will prevent the browser from interpreting files as a different MIME type to what is specified in the Content-Type HTTP header.
Strict-Transport-Security: The HTTP Strict-Transport-Security response header (HSTS) allows web servers to declare that web browsers (or other complying user agents) should only interact with it using secure HTTPS connections, and never via the insecure HTTP protocol.

IMPACT:

Depending on the vulnerability being exploited, an unauthenticated remote attacker could conduct cross-site scripting, clickjacking or MIME-type sniffing attacks.

SOLUTION:

Note: To better debug the results of this QID, it is requested that customers execute commands to simulate the following functionality: curl -lkL --verbose.

CWE-693: Protection Mechanism Failure mentions the following - The product does not use or incorrectly uses a protection mechanism that provides sufficient defense against directed attacks against the product. A "missing" protection mechanism occurs when the application does not define any mechanism against a certain class of attack. An "insufficient" protection mechanism might provide some defenses - for example, against the most common attacks - but it does not protect against everything that is intended. Finally, an "ignored" mechanism occurs when a mechanism is available and in active use within the product, but the developer has not applied it in some code path.

Customers are advised to set proper X-Content-Type-Options (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Content-Type-Options) and Strict-Transport-Security (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Strict-Transport-Security) HTTP response headers.

Depending on their server software, customers can set directives in their site configuration or Web.config files. Few examples are:

X-Content-Type-Options:
Apache: Header always set X-Content-Type-Options: nosniff

HTTP Strict-Transport-Security:
Apache: Header always set Strict-Transport-Security "max-age=31536000; includeSubDomains"
Nginx: add_header Strict-Transport-Security max-age=31536000;

Note: Network devices that include a HTTP/HTTPS console for administrative/management purposes often do not include all/some of the security headers. This is a known issue and it is recommend to contact the vendor for a solution.

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

X-Content-Type-Options HTTP Header missing on port 80.

THREAT:

Multiple Vulnerabilities exist in Microsoft .Net Framework.

Following KBs are covered in this detection:
5127685
5127686
5127684
5127693
5127687
5127666
5127688
5127664
5127660
5127694
5127668
5127696
5127692
5127691
5127667
5127690
5127683
5127689

This security update is rated Important for supported versions of Microsoft .NET Framework.
.NET Framework 2.0, 3.0, 3.5, 4.6.2, 4.7, 4.7.1, 4.7.2, 4.8, and 4.8.1

IMPACT:

A vulnerable .NET Framework version may be prone toRemote Code Execution or Elevation of Privileges

SOLUTION:

Customers are advised to refer to the the Article(s):
.NET Framework (https://msrc.microsoft.com/update-guide)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

CVE-2026-97801 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-97801)

CVE-2026-96958 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96958)

Last Fixed: N/A

THREAT:

EdgeChromium has released security update for Mac and Windows to fix the vulnerabilities.

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to upgrade to version 154.0.4258.48 or later
(https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#september-29th-2026)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

Edge (chromium based) 154.0.4258.48 (https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#september-29th-2026)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

C:\Program Files (x86)\Microsoft\Edge\Application\msedge.exe Version is 153.0.4234.32

4 Microsoft Edge Based on Chromium Prior to 153.0.4234.48 Multiple Vulnerabilities Active

First Detected: 01 Sep 2026 07:49:59 PM (GMT+0200)
Last Detected: 22 Oct 2026 09:16:13 AM (GMT+0200)
Times Detected: 3
Last Fixed: N/A

THREAT:

Windows NT may use a cache to store the last interactive logon (i.e. console logon), to provide a safe logon for the host in the event that the Domain Controller goes down. This feature is currently activated on this host.

IMPACT:

Unauthorized users can gain access to this cached information, thereby obtaining sensitive logon information.

SOLUTION:

We recommend that you locate the following Registry key, and then set or create a REG_SZ 'CachedLogonsCount' entry with a '0' value:
HKEY_LOCAL_MACHINE\Software\Microsoft\Windows Nt\CurrentVersion\Winlogon

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon cachedlogonscount = 4

2 HTTP Security Header Not Detected port 80/tcp Active

QID:	11827
Category:	CGI
Associated CVEs:	-
Vendor Reference:	-
Bugtraq ID:	-
Service Modified:	02 Jan 2025
User Modified:	-

Edited:	No
PCI Vuln:	Yes
Ticket State:	
QDS:	30

First Detected: 04 Aug 2026 07:53:12 PM (GMT+0200)
Last Detected: 22 Oct 2026 09:16:13 AM (GMT+0200)
Times Detected: 4
Last Fixed: N/A

THREAT:

This QID reports the absence of the following HTTP headers (https://www.owasp.org/index.php/OWASP_Secure_Headers_Project#tab=Headers) according to CWE-693: Protection Mechanism Failure (https://cwe.mitre.org/data/definitions/693.html):

X-Content-Type-Options: This HTTP header will prevent the browser from interpreting files as a different MIME type to what is specified in the Content-Type HTTP header.
Strict-Transport-Security: The HTTP Strict-Transport-Security response header (HSTS) allows web servers to declare that web browsers (or other complying user agents) should only interact with it using secure HTTPS connections, and never via the insecure HTTP protocol.

IMPACT:

Depending on the vulnerability being exploited, an unauthenticated remote attacker could conduct cross-site scripting, clickjacking or MIME-type sniffing attacks.

SOLUTION:

Note: To better debug the results of this QID, it is requested that customers execute commands to simulate the following functionality: curl -lkL --verbose.

CWE-693: Protection Mechanism Failure mentions the following - The product does not use or incorrectly uses a protection mechanism that provides sufficient defense against directed attacks against the product. A "missing" protection mechanism occurs when the application does not define any mechanism against a certain class of attack. An "insufficient" protection mechanism might provide some defenses - for example, against the most common attacks - but it does not protect against everything that is intended. Finally, an "ignored" mechanism occurs when a mechanism is available and in active use within the product, but the developer has not applied it in some code path.

Customers are advised to set proper X-Content-Type-Options (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Content-Type-Options) and Strict-Transport-Security (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Strict-Transport-Security) HTTP response headers.

Depending on their server software, customers can set directives in their site configuration or Web.config files. Few examples are:

X-Content-Type-Options:
Apache: Header always set X-Content-Type-Options: nosniff

HTTP Strict-Transport-Security:
Apache: Header always set Strict-Transport-Security "max-age=31536000; includeSubDomains"
Nginx: add_header Strict-Transport-Security max-age=31536000;

Note: Network devices that include a HTTP/HTTPS console for administrative/management purposes often do not include all/some of the security headers. This is a known issue and it is recommend to contact the vendor for a solution.

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

X-Content-Type-Options HTTP Header missing on port 80.

5126835 (https://support.microsoft.com/en-in/help/5126835)

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or may affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to refer following articles for more information on the vulnerabilities and patches.
5126646 (https://support.microsoft.com/en-in/help/5126646)
5126655 (https://support.microsoft.com/en-in/help/5126655)
5126651 (https://support.microsoft.com/en-in/help/5126651)
5126868 (https://support.microsoft.com/en-in/help/5126868)
5126836 (https://support.microsoft.com/en-in/help/5126836)
5126835 (https://support.microsoft.com/en-in/help/5126835)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

5126646 (https://support.microsoft.com/en-in/help/5126646)

5126655 (https://support.microsoft.com/en-in/help/5126655)

5126651 (https://support.microsoft.com/en-in/help/5126651)

5126868 (https://support.microsoft.com/en-in/help/5126868)

5126836 (https://support.microsoft.com/en-in/help/5126836)

5126835 (https://support.microsoft.com/en-in/help/5126835)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

THREAT:

EdgeChromium has released security update for Mac and Windows to fix the vulnerabilities.

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to upgrade to version 154.0.4258.62 or later

(https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#october-05-2026)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

Edge (chromium based) 154.0.4258.62 (https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#october-05-2026)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

C:\Program Files (x86)\Microsoft\Edge\Application\msedge.exe Version is 153.0.4234.32

4 Microsoft Edge Based on Chromium Prior to 155.0.4283.60 Multiple Vulnerabilities New

QID:	389033
Category:	Local
Associated CVEs:	-
Vendor Reference:	Edge (chromium based) 155.0.4283.60
Bugtraq ID:	-
Service Modified:	20 Oct 2026
User Modified:	-

Times Detected: 1
Last Fixed: N/A

THREAT:

EdgeChromium has released security update for Mac and Windows to fix the vulnerabilities.

IMPACT:

`Successful exploitation of this vulnerability could lead to a security breach or affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to upgrade to version 155.0.4283.60 or later
(https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#october-15-2026)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

Edge (chromium based) 155.0.4283.60 (https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#october-15-2026)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

C:\Program Files (x86)\Microsoft\Edge\Application\msedge.exe Version is 153.0.4234.32

THREAT:

Multiple Vulnerabilities exist in Microsoft .Net Framework.

Following KBs are covered in this detection:
5127685
5127686
5127684
5127693
5127687
5127666
5127688
5127664
5127660
5127694
5127668
5127696
5127692
5127691
5127667
5127690
5127683
5127689

This security update is rated Important for supported versions of Microsoft .NET Framework.
.NET Framework 2.0, 3.0, 3.5, 4.6.2, 4.7, 4.7.1, 4.7.2, 4.8, and 4.8.1

IMPACT:

A vulnerable .NET Framework version may be prone toRemote Code Execution or Elevation of Privileges

SOLUTION:

Customers are advised to refer to the the Article(s):
.NET Framework (https://msrc.microsoft.com/update-guide)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

CVE-2026-97801 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-97801)

CVE-2026-96958 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96958)

CVE-2026-96959 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96959)

CVE-2026-96960 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96960)

CVE-2026-108398 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-108398)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

KB5127687 is not installed
%windir%\Microsoft.NET\Framework64\v4.0.30319\Mscorlib.dll Version is 4.8.4795.0
%windir%\Microsoft.NET\Framework\v4.0.30319\Mscorlib.dll Version is 4.8.4795.0

First Detected: 04 Aug 2026 08:21:15 PM (GMT+0200)
Last Detected: 22 Oct 2026 08:56:54 AM (GMT+0200)
Times Detected: 4
Last Fixed: N/A

THREAT:

Windows NT may use a cache to store the last interactive logon (i.e. console logon), to provide a safe logon for the host in the event that the Domain Controller goes down. This feature is currently activated on this host.

IMPACT:

Unauthorized users can gain access to this cached information, thereby obtaining sensitive logon information.

SOLUTION:

We recommend that you locate the following Registry key, and then set or create a REG_SZ 'CachedLogonsCount' entry with a '0' value:
HKEY_LOCAL_MACHINE\Software\Microsoft\Windows Nt\CurrentVersion\Winlogon

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon cachedlogonscount = 4

THREAT:

Microsoft Windows Security Update for October 2026

KB5126836 (https://support.microsoft.com/en-in/help/5126836)
KB5126868 (https://support.microsoft.com/en-in/help/5126868)
KB5126835 (https://support.microsoft.com/en-in/help/5126835)
KB5126646 (https://support.microsoft.com/en-in/help/5126646)
KB5126655 (https://support.microsoft.com/en-in/help/5126655)
KB5126651 (https://support.microsoft.com/en-in/help/5126651)

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or may affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to refer following articles for more information on the vulnerabilities and patches.

KB5126836 (https://support.microsoft.com/en-in/help/5126836)
KB5126868 (https://support.microsoft.com/en-in/help/5126868)
KB5126835 (https://support.microsoft.com/en-in/help/5126835)
KB5126646 (https://support.microsoft.com/en-in/help/5126646)
KB5126655 (https://support.microsoft.com/en-in/help/5126655)
KB5126651 (https://support.microsoft.com/en-in/help/5126651)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

KB5126836 (https://support.microsoft.com/en-in/help/5126836)

KB5126868 (https://support.microsoft.com/en-in/help/5126868)

KB5126835 (https://support.microsoft.com/en-in/help/5126835)

KB5126646 (https://support.microsoft.com/en-in/help/5126646)

KB5126655 (https://support.microsoft.com/en-in/help/5126655)

KB5126651 (https://support.microsoft.com/en-in/help/5126651)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

Missing Patch/KB: KB5126655
File: %windir%\system32\ntoskrnl.exe
Installed Version: 10.0.20348.5622
Required Version: 10.0.20348.5756

4 Microsoft .NET Framework Update for October 2026 New

QID:	92474
Category:	Windows
Associated CVEs:	CVE-2026-108398, CVE-2026-96958, CVE-2026-96959, CVE-2026-96960, CVE-2026-97801, CVE-2026-58280, CVE-2026-69651, CVE-2026-70007, CVE-2026-70035, CVE-2026-70174, CVE-2026-83520, CVE-2026-84008, CVE-2026-85363, CVE-2026-96222, CVE-2026-96224, CVE-2026-96233, CVE-2026-102869, CVE-2026-97788
Vendor Reference:	CVE-2026-97801, CVE-2026-108398, CVE-2026-96958, CVE-2026-96959, CVE-2026-96960

Times Detected: 1

Last Fixed: N/A

THREAT:

Multiple Vulnerabilities exist in Microsoft .Net Framework.

Following KBs are covered in this detection:
5127685
5127686
5127684
5127693
5127687
5127666
5127688
5127664
5127660
5127694
5127668
5127696
5127692
5127691
5127667
5127690
5127683
5127689

This security update is rated Important for supported versions of Microsoft .NET Framework.
.NET Framework 2.0, 3.0, 3.5, 4.6.2, 4.7, 4.7.1, 4.7.2, 4.8, and 4.8.1

IMPACT:

A vulnerable .NET Framework version may be prone toRemote Code Execution or Elevation of Privileges

SOLUTION:

Customers are advised to refer to the the Article(s):
.NET Framework (https://msrc.microsoft.com/update-guide)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

CVE-2026-97801 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-97801)

CVE-2026-96958 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96958)

CVE-2026-96959 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96959)

CVE-2026-96960 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96960)

CVE-2026-108398 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-108398)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

KB5127687 is not installed
%windir%\Microsoft.NET\Framework64\v4.0.30319\Mscorlib.dll Version is 4.8.4795.0
%windir%\Microsoft.NET\Framework\v4.0.30319\Mscorlib.dll Version is 4.8.4795.0

4 Microsoft Edge Based on Chromium Prior to 155.0.4283.45 Multiple Vulnerabilities New

THREAT:

EdgeChromium has released security update for Mac and Windows to fix the vulnerabilities.

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to upgrade to version 153.0.4234.48 or later
(https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#september-18-2026)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

Edge (chromium based) 153.0.4234.48 (https://learn.microsoft.com/en-us/DeployEdge/microsoft-edge-relnotes-security#september-18-2026)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

C:\Program Files (x86)\Microsoft\Edge\Application\msedge.exe Version is 153.0.4234.32

4 Microsoft Edge Based on Chromium Prior to 154.0.4258.53 Multiple Vulnerabilities Active

Last Fixed: N/A

THREAT:

Windows NT may use a cache to store the last interactive logon (i.e. console logon), to provide a safe logon for the host in the event that the Domain Controller goes down. This feature is currently activated on this host.

IMPACT:

Unauthorized users can gain access to this cached information, thereby obtaining sensitive logon information.

SOLUTION:

We recommend that you locate the following Registry key, and then set or create a REG_SZ 'CachedLogonsCount' entry with a '0' value:
HKEY_LOCAL_MACHINE\Software\Microsoft\Windows Nt\CurrentVersion\Winlogon

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon cachedlogonscount = 4

THREAT:

Microsoft Windows Security Update for October 2026

KB5126836 (https://support.microsoft.com/en-in/help/5126836)
KB5126868 (https://support.microsoft.com/en-in/help/5126868)
KB5126835 (https://support.microsoft.com/en-in/help/5126835)
KB5126646 (https://support.microsoft.com/en-in/help/5126646)
KB5126655 (https://support.microsoft.com/en-in/help/5126655)
KB5126651 (https://support.microsoft.com/en-in/help/5126651)

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or may affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to refer following articles for more information on the vulnerabilities and patches.

KB5126836 (https://support.microsoft.com/en-in/help/5126836)
KB5126868 (https://support.microsoft.com/en-in/help/5126868)
KB5126835 (https://support.microsoft.com/en-in/help/5126835)
KB5126646 (https://support.microsoft.com/en-in/help/5126646)
KB5126655 (https://support.microsoft.com/en-in/help/5126655)
KB5126651 (https://support.microsoft.com/en-in/help/5126651)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

KB5126836 (https://support.microsoft.com/en-in/help/5126836)

KB5126868 (https://support.microsoft.com/en-in/help/5126868)

KB5126835 (https://support.microsoft.com/en-in/help/5126835)

KB5126646 (https://support.microsoft.com/en-in/help/5126646)

KB5126655 (https://support.microsoft.com/en-in/help/5126655)

KB5126651 (https://support.microsoft.com/en-in/help/5126651)

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

Missing Patch/KB: KB5126655
File: %windir%\system32\ntoskrnl.exe
Installed Version: 10.0.20348.5622
Required Version: 10.0.20348.5756

5 Microsoft Windows Server Security Update for October 2026 New

THREAT:

Multiple Vulnerabilities exist in Microsoft .Net Framework.

Following KBs are covered in this detection:
5127685
5127686
5127684
5127693
5127687
5127666
5127688
5127664
5127660
5127694
5127668
5127696
5127692
5127691
5127667
5127690
5127683
5127689

This security update is rated Important for supported versions of Microsoft .NET Framework.
.NET Framework 2.0, 3.0, 3.5, 4.6.2, 4.7, 4.7.1, 4.7.2, 4.8, and 4.8.1

IMPACT:

A vulnerable .NET Framework version may be prone toRemote Code Execution or Elevation of Privileges

SOLUTION:

Customers are advised to refer to the the Article(s):
.NET Framework (https://msrc.microsoft.com/update-guide)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

CVE-2026-97801 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-97801)

THREAT:

Microsoft .NET Security Update for September 2026

Affected Versions:
.Net 8.0 prior to 8.0.32
.Net 10.0 prior to 10.0.13
.Net 9.0 prior to 9.0.21
.Net 11.0 prior to 11.0 RC2

IMPACT:

Successful exploitation of this vulnerability could lead to a security breach or may affect integrity, availability, and confidentiality.

SOLUTION:

Customers are advised to refer following articles for more information on the vulnerabilities and patches.
CVE-2026-70035 (https://msrc.microsoft.com/update-guide/en-US/vulnerability/CVE-2026-70035)

Last Detected: 22 Oct 2026 09:13:58 AM (GMT+0200)
Times Detected: 4
Last Fixed: N/A

THREAT:

Windows NT may use a cache to store the last interactive logon (i.e. console logon), to provide a safe logon for the host in the event that the Domain Controller goes down. This feature is currently activated on this host.

IMPACT:

Unauthorized users can gain access to this cached information, thereby obtaining sensitive logon information.

SOLUTION:

We recommend that you locate the following Registry key, and then set or create a REG_SZ 'CachedLogonsCount' entry with a '0' value:
HKEY_LOCAL_MACHINE\Software\Microsoft\Windows Nt\CurrentVersion\Winlogon

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon cachedlogonscount = 4

THREAT:

This QID reports the absence of the following HTTP headers (https://www.owasp.org/index.php/OWASP_Secure_Headers_Project#tab=Headers) according to CWE-693: Protection Mechanism Failure (https://cwe.mitre.org/data/definitions/693.html):

X-Content-Type-Options: This HTTP header will prevent the browser from interpreting files as a different MIME type to what is specified in the Content-Type HTTP header.
Strict-Transport-Security: The HTTP Strict-Transport-Security response header (HSTS) allows web servers to declare that web browsers (or other complying user agents) should only interact with it using secure HTTPS connections, and never via the insecure HTTP protocol.

IMPACT:

Depending on the vulnerability being exploited, an unauthenticated remote attacker could conduct cross-site scripting, clickjacking or MIME-type sniffing attacks.

SOLUTION:

Note: To better debug the results of this QID, it is requested that customers execute commands to simulate the following functionality: curl -IkL --verbose.

CWE-693: Protection Mechanism Failure mentions the following - The product does not use or incorrectly uses a protection mechanism that provides sufficient defense against directed attacks against the product. A "missing" protection mechanism occurs when the application does not define any mechanism against a certain class of attack. An "insufficient" protection mechanism might provide some defenses - for example, against the most common attacks - but it does not protect against everything that is intended. Finally, an "ignored" mechanism occurs when a mechanism is available and in active use within the product, but the developer has not applied it in some code path.

Customers are advised to set proper X-Content-Type-Options (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Content-Type-Options) and Strict-Transport-Security (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Strict-Transport-Security) HTTP response headers.

Depending on their server software, customers can set directives in their site configuration or Web.config files. Few examples are:

X-Content-Type-Options:

Apache: Header always set X-Content-Type-Options: nosniff

HTTP Strict-Transport-Security:
Apache: Header always set Strict-Transport-Security "max-age=31536000; includeSubDomains"
Nginx: add_header Strict-Transport-Security max-age=31536000;

Note: Network devices that include a HTTP/HTTPS console for administrative/management purposes often do not include all/some of the security headers. This is a known issue and it is recommend to contact the vendor for a solution.

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

X-Content-Type-Options HTTP Header missing on port 80.

THREAT:

Multiple Vulnerabilities exist in Microsoft .Net Framework.

Following KBs are covered in this detection:
5127685
5127686
5127684
5127693
5127687
5127666
5127688
5127664
5127660
5127694
5127668
5127696
5127692
5127691
5127667
5127690
5127683
5127689

This security update is rated Important for supported versions of Microsoft .NET Framework.
.NET Framework 2.0, 3.0, 3.5, 4.6.2, 4.7, 4.7.1, 4.7.2, 4.8, and 4.8.1

IMPACT:

A vulnerable .NET Framework version may be prone toRemote Code Execution or Elevation of Privileges

SOLUTION:

Customers are advised to refer to the the Article(s):
.NET Framework (https://msrc.microsoft.com/update-guide)

Patch:
Following are links for downloading patches to fix the vulnerabilities:

CVE-2026-97801 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-97801)

CVE-2026-96958 (https://msrc.microsoft.com/update-guide/vulnerability/CVE-2026-96958)

First Detected: 04 Aug 2026 07:53:05 PM (GMT+0200)
Last Detected: 22 Oct 2026 09:13:59 AM (GMT+0200)
Times Detected: 4
Last Fixed: N/A

THREAT:

Windows NT may use a cache to store the last interactive logon (i.e. console logon), to provide a safe logon for the host in the event that the Domain Controller goes down. This feature is currently activated on this host.

IMPACT:

Unauthorized users can gain access to this cached information, thereby obtaining sensitive logon information.

SOLUTION:

We recommend that you locate the following Registry key, and then set or create a REG_SZ 'CachedLogonsCount' entry with a '0' value:
HKEY_LOCAL_MACHINE\Software\Microsoft\Windows Nt\CurrentVersion\Winlogon

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon cachedlogonscount = 4

THREAT:

This QID reports the absence of the following HTTP headers (https://www.owasp.org/index.php/OWASP_Secure_Headers_Project#tab=Headers) according to CWE-693: Protection Mechanism Failure (https://cwe.mitre.org/data/definitions/693.html):

X-Content-Type-Options: This HTTP header will prevent the browser from interpreting files as a different MIME type to what is specified in the Content-Type HTTP header.
Strict-Transport-Security: The HTTP Strict-Transport-Security response header (HSTS) allows web servers to declare that web browsers (or other complying user agents) should only interact with it using secure HTTPS connections, and never via the insecure HTTP protocol.

IMPACT:

Depending on the vulnerability being exploited, an unauthenticated remote attacker could conduct cross-site scripting, clickjacking or MIME-type sniffing attacks.

SOLUTION:

Note: To better debug the results of this QID, it is requested that customers execute commands to simulate the following functionality: curl -lkL --verbose.

CWE-693: Protection Mechanism Failure mentions the following - The product does not use or incorrectly uses a protection mechanism that provides sufficient defense against directed attacks against the product. A "missing" protection mechanism occurs when the application does not define any mechanism against a certain class of attack. An "insufficient" protection mechanism might provide some defenses - for example, against the most common attacks - but it does not protect against everything that is intended. Finally, an "ignored" mechanism occurs when a mechanism is available and in active use within the product, but the developer has not applied it in some code path.

Customers are advised to set proper X-Content-Type-Options (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Content-Type-Options) and Strict-Transport-Security (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Strict-Transport-Security) HTTP response headers.

Depending on their server software, customers can set directives in their site configuration or Web.config files. Few examples are:

X-Content-Type-Options:
Apache: Header always set X-Content-Type-Options: nosniff

HTTP Strict-Transport-Security:
Apache: Header always set Strict-Transport-Security "max-age=31536000; includeSubDomains"
Nginx: add_header Strict-Transport-Security max-age=31536000;

Note: Network devices that include a HTTP/HTTPS console for administrative/management purposes often do not include all/some of the security headers. This is a known issue and it is recommend to contact the vendor for a solution.

EXPLOITABILITY:

There is no exploitability information for this vulnerability.

RESULTS:

X-Content-Type-Options HTTP Header missing on port 80.
